Tatham & Egg

The lock construction represents the final state of technology of the flintlock era.

The movement of the cock in the French-style is stopped by the firing shield.

The flintlock pistol is equipped with a fine direct trigger.

All the lock parts are made using high-quality materials from the full piece. No molded parts are used! In this way, each weapon becomes a unique single piece.

Each weapon is made by hand according to your wishes.

Standard design:

- barrel cal. .44 smooth bore or rifled
- stock from walnut wood without checkering
- Flintlock without hammer safety
- all metal parts without engraving
- stock fore-end completely of walnut wood
- ramrod of walnut wood
- flash-hole inlay of special rustproof inox steel
- barrel browned, lock and other parts blank hardened
- front sight adjustable for windage

Technical data:

- barrel length 259 mm
- sight length 246mm
- total length approx. 410mm (according to stock length)
- weight approx. 1200g

Additional charges for:

- stocks made out of walnut wood
- checkering
- bullet mold
